

Emergency Operations / 911 Call Centers

FREEAXEZ USA™ – A new paradigm for raised access flooring

The FreeAxez low profile, all steel, access floor is the optimal wire management solution for the emergency management environment:

- **High Strength All Steel** –high load-bearing, long-lasting.
- **Ease of Installation** - 1000 square feet per installer per day.
- **Simplicity of Use** – 5-second access to power, voice and data cabling.
- **Lowest Profile** - of any raised floor available (1.6", 2.75").
- **Immediate ROI** – instant payback realized during turnover and re-configurations.
- **Sustainable Design** – the first low profile system listed in GreenSpec.

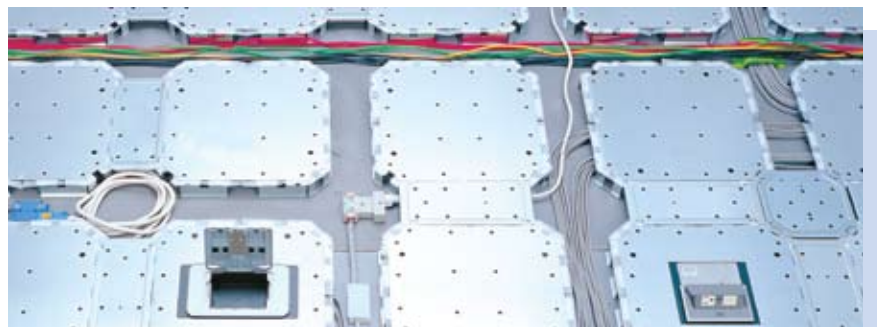

FreeAxez has high capacity for any wire intensive environment.

Switchboards may have several hundred phone lines coming into one console. Plasma screens, audio/visual equipment, computers, processors, recorders, security check-points, and badge readers require power and data wiring. FreeAxez provides a flexible and high capacity solution for console wiring.

Personnel, equipment, furniture and cabling are undergoing constant changes!

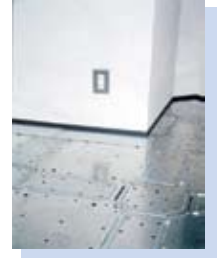

In traditional construction environments, each new or relocated piece of equipment and furniture require excessive time and effort! FreeAxez can eliminate the need for drilling, running new wires behind walls, above drop ceilings, and down power poles, all of which can cause disruption and incur expenses. FreeAxez replaces wired furniture systems, avoiding the narrow wire raceways, that quickly become over-crowded and inflexible.

FreeAxez provides “5-second no-tool access” to wire channels.

Simply remove the floor tile and lift the channel plates; new wires are installed in seconds instead of hours! Consider installing FreeAxez in offices, conference rooms, training rooms, surveillance / dispatch areas, lobby areas, server rooms, call centers, etc. FreeAxez will pay for itself over and over again in any space with audio-visual, telecom and computing equipment.

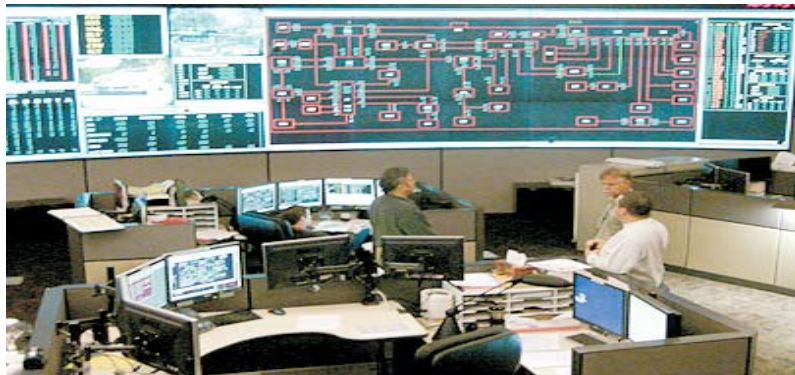

FreeAxez is the best choice for both renovation and new construction.

FreeAxez has superior performance for the fit-out of existing space. The gravity-held, quick-connect components are rapidly installed without glues, screws or fasteners. Open areas are installed at a rate of 1000 SF per installer per day and the border components fill the gaps quickly without the need to cut metal. FreeAxez provides for the efficient fit-out of irregular areas, including round rooms, curved walls, angled walls, columns, transitions, door jams, and vents.

FreeAxez is equally valuable when planning for new buildings. In new construction projects, the slab is often suppressed to accommodate the floor; no ramps required and flexibility occurs from day one! FreeAxez does not attach to the building, your investment can be depreciable in only seven years – further savings!

FreeAxez is adaptable and flexible for moves, adds and changes.

Low ceilings can make the space feel small and cramped. The FreeAxez system is the lowest available in the world...only 1.6” high and still maintains high cable capacity! To put this into perspective, it is approximately the height of two sheets of 3/4” plywood

FreeAxez - every emergency operations / 911 call center deserves this floor!

Top organizations like **Department of Homeland Security, US Coast Guard, Northrop Grumman, Lockheed Martin, Vicksburg 911, Columbiana County 911, Massachusetts Institute of Technology (M.I.T.) Johnson & Johnson, Siemens, and all branches of the US Military** (to name a few!) have installed FreeAxez in varied and critical applications.

FreeAxez has quality representatives in your area who are available to briefly demonstrate the FreeAxez flooring system at your facility. Feel free to contact FreeAxez at 888-747-8515 to discuss how we might assist your organization in joining the growing family of clients who have made FreeAxez their wire management solution.
