

Renovations

FREEAXEZ USA™ – A new paradigm for raised access flooring

The FreeAxez low-profile steel access floor is an excellent choice for wire management solution for the renovation of existing buildings.

The innovative, revolutionary design incorporates:

- **High Strength All Steel** – high load-bearing, long-lasting
- **Ease of Installation** - 1000 square feet per installer per day
- **Gravity-Held** - preserves subfloor and walls. FreeAxez does not attach to the building.
- **Simplicity of Use** – 5-second access to power, voice & data cabling
- **Lowest Profile** - of any raised floor available (1.6", 2.75")
- **Immediate ROI** – instant payback realized during turnover and re-configurations
- **Sustainable Design** – the first low profile system listed in GreenSpec

FreeAxez brings technology to existing buildings!

FreeAxez provides significant benefits for the retrofit and renovation of existing structures. Today's demand for hi-tech space requires significant power/voice/data cabling. Oftentimes existing buildings are considered completely obsolete due to the difficulty in running these cables. Raised flooring solves this problem, and the FreeAxez design is optimal since it does not attach to the building at the sub floor or walls.

FreeAxez is the only green sustainable low-profile access floor!

FreeAxez is the only access floor that is UL-listed, and the only low-profile system listed in the GreenSpec Directory of sustainable building products. FreeAxez provides designers and building owners with LEED points in four categories, and is 100% recyclable.

LEED MR 1 - Building Reuse:

"FreeAxez extends the life cycle of existing building stock, conserves resources, retains cultural resources, reduces waste and reduces environmental impacts of new buildings as they relate to materials manufacturing and transport."

FreeAxez offers fit-out flexibility for existing spaces.

In renovation, the quick-connect FreeAxez system goes together quickly—**no tools are required!** Open areas are installed at 1000 square feet per day per installer; adjustable border components fill the gaps quickly without the need for custom panels or metal cutting. The low profile height means that the ADA-compliant ramp components take up far less valuable space than for taller raised floors, without handrails!

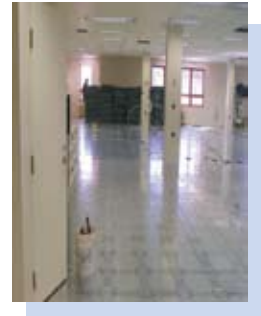

FreeAxez provides for the efficient fit-out of irregular areas, including round rooms, curved walls, angled walls, columns, transitions, door jams, and vents.

FreeAxez preserves the integrity of historic structures.

As a result of its unique design, the gravity-held FreeAxez floors can lay on top of existing terrazzo, marble or wood floors without any destruction to the floor. Since the floor is not screwed or connected to the walls, FreeAxez does not damage any fine woodwork on the walls.

Save valuable vertical space! The FreeAxez system is the lowest available in the world... only 1.6" or 2.75" high!

FreeAxez will add value in many areas of your office building!

Consider installing FreeAxez in offices, conference rooms, training rooms, surveillance/dispatch areas, lobby areas, server rooms, call centers etc. FreeAxez will pay for itself over and over again in any space with power, voice, data and audio/visual requirements.

Every commercial and historical building deserves this floor!

Top organizations like **Johnson & Johnson, Sotheby's, Siemens, Massachusetts Institute of Technology (M.I.T.), Northrop Grumman, Lockheed Martin, and all branches of the US Military** (to name a few!) have installed FreeAxez in varied and critical applications.

FreeAxez has quality representatives in your area who are available to briefly demonstrate the FreeAxez flooring system at your facility. Feel free to contact FreeAxez at 888-747-8515 to discuss how we might assist your organization in joining the growing family of clients who have made FreeAxez their wire management solution.
