

## Gridd is an ideal wire management solution for courtrooms

### Gridd's innovative and revolutionary design incorporates:

- **Lowest Profile** - of any raised access floor available (1.6" or 2.75").
- **High Capacity** - Large cable capacity with organized channels for cable runs.
- **All Steel** - High durability and strength. Double 16 gauge zinc galvanized steel.
- **Efficient Installation** - 1000 square feet per installer per day.
- **Simplicity of Use** - No tools required for access to power, voice and data cabling.
- **Immediate ROI** - Instant payback realized during turnover and re-configurations.
- **Sustainable Design** - GreenSpec listed; 100% recyclable, reusable, refundable.
- **Addition by Subtraction** - Eliminate power poles and exposed cabling.
- **Rapid Depreciation** - as equipment.

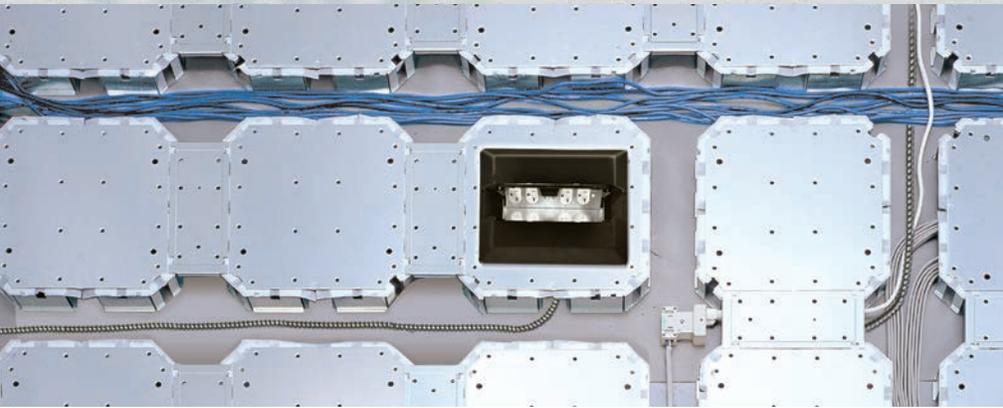

### Gridd delivers superior wire management in court rooms.

Gridd brings technology and efficiencies to the well area of courtrooms, which is the open space between the public, the jury box and the judge's bench. Each court case poses a unique set of wiring challenges. Many cables and connections are needed in this limited area to enable attorney's laptop computers, microphones, projectors, video screens, A/V equipment, etc...and must remain clutter-free.

Gridd provides organized pathways under the floor, and floor boxes for power/voice/data connections. To make changes to equipment and wires, simply remove the floor tile, and lift the channel plates along the wiring path and install the cables without tools...in a fraction of the time! All in an aesthetically pleasing space without the clutter and tripping hazard of cables, extension cords and power strips all over the place!

### Connectivity where you need it

Floor boxes integrate into the Gridd system to provide power, voice and data connections. Our 1.6" ultra shallow box is the lowest available, any manufacturer's 2 1/2" box will work in our 2.75" system. Add or relocate outlets for computers, phones, furniture...in minutes!

## Excellent acoustics

Judges and court administrators constantly emphasize the importance of sound quality. Gridd is virtually silent - footfall sounds are eliminated by the design of the system. You will not know you are walking on a raised access floor!

## Minimal ramping preserves valuable floor space

Gridd offers modular straight and angled ramp components that meet ADA slope requirements and provide seamless transitions at entranceways. Gridd ramps are only 19" long...ramping consumes far less valuable space than taller traditional raised access floors. No handrails required.

## More flexible and user-friendly than core drilling

Core drilling (i.e. putting electrical plugs in the walls, and running wiring in trenches in the concrete) is time consuming and impractical. Wall outlets and floor boxes in fixed locations in the concrete are not adaptable to changes, and do not conceal the dozens of cables and wiring needed to power and run the equipment.

## Gridd is ideal for renovations and historic court houses

As a result of its unique design, the gravity-held Gridd floors can lay on top of existing terrazzo, marble or wood floors without any destruction to the floor. Since the floor is not screwed or connected to the walls, Gridd does not damage any fine woodwork on the walls.

Made in USA

## Gridd—every court room deserves this system!

Top organizations like District of Columbia (DC) Superior Courts, District of Columbia (DC) Court of Appeals, Provo (UT) Juvenile Courts, Sedgwick County Courts, and Sedgwick Juvenile Courts (to name a few!) have installed Gridd in varied and critical applications.

FreeAxez has quality representatives in your area who are available to demonstrate the Gridd low profile access floor system at your facility. Feel free to contact FreeAxez at 856-764-0400 to discuss how we might assist your organization in joining the growing family of clients who have made Gridd their wire management solution.
